

**ABSTRACT OF THE DISCLOSURE**

5 A molding tile apparatus is mounted onto abutting wall surfaces forming either an inside corner or an outside corner. A corner turning portion has a horizontal, lateral extent for covering the wall abutment vicinity in the corner, and a horizontally oriented, linearly extensive, leg portion integral or separate from the corner turning portion. An interface between the leg portion and the corner turning portion is defined by a thickness differential. The corner portion may receive a decorative insert.
